

Airbus H125/AS350/355 BOOST Quick Release CARGO BASKET and Boarding STEP

QUICK RELEASE CARGO BASKET & BOARDING STEP

The **BOOST Basket** offers the largest cargo capacity of all H125/AS350/AS355 baskets available on the market today. With a cargo capacity of 500 lbs per side, the BOOST Cargo Basket is the answer to your operational needs.

The basket can be installed on either side of the aircraft and the quick release installation mechanism allows for installation and removal of the basket without tools, leaving the mounting posts in place on the helicopter. The basket itself is made of corrosion-resistant stainless steel coated with scratch resistant white powder coat. The basket has a removeable hinged lid complete with self-locking handle.

BOOST also offers an optional BOOST Boarding Step which is an aluminum assembly finished with scratch-resistant white powder coat, that bolts to the skidtube to facilitate boarding and egress of the aircraft.
